March 2010

Annual MSR Production Survey

THANK YOU to all of the participants in this year's annual MSR Production Survey! We greatly appreciate you taking the time to share with us this pertinent information.

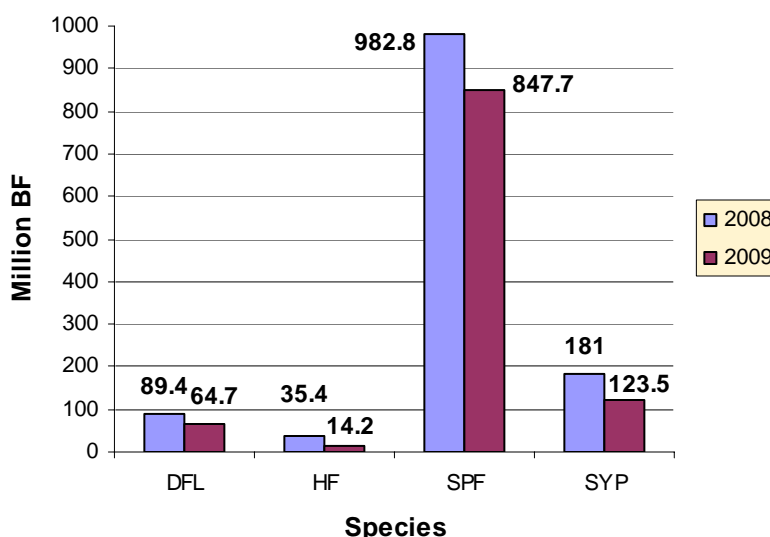

The MSR Production Survey is the only one of its kind that tracks MSR lumber production by species, grade, and size. Since 1994, the MSR Lumber Producers Council has published this annual production survey that includes data from both Council members and nonmembers. This survey is a useful tool for monitoring the progress of the MSR lumber industry in North America and ultimately promoting the use of MSR lumber worldwide.

For the 2009 MSR production year, survey responses were received from 28 MSR lumber producers in the US and Canada. The responses were from the same producers as the preceding year, allowing us to make a direct and accurate comparison of production from 2008 to 2009.

Annual MSR lumber production for the last 3 years has been lower than at any other point for the preceding decade. Overall, MSR lumber production peaked in 2005 at 2376.1 million board feet and was 1050.0 million board feet in 2009.

The complete results of the MSR Production Survey are available to Council members. If you have questions about your membership status or would like to request a copy, please [let us know](#). Thank you for your support!
